

Aggregated Pools

If you do not know how much data you need each month as your SIM estate is not static, you can order an Aggregated Pool. Aggregated Pools are available for MultiNet, Three, EE, KPN, eSIM and Vodafone LP-WAN SIMs. An aggregated pool of data is created using multiple SIMs on the same tariff. Aggregated Pool sizes change every time a data SIM is added or removed (e.g. if you assigned five 10GB SIMs, your Aggregated Pool size is 50GB). You cannot use bolt-ons in Aggregated Pools.

Fixed Pools

If you know how much data you are using each month, you can order a Fixed Pool and select your monthly data allowance from 25GB to 10TB. In Mobile Manager you can control your pool and SIMs assigned to it. Total usage for SIMs in the pool will be calculated against the pool capacity, overages will be clearly visible. Tariffs with an inclusive data allowance and Sharer SIMs (no allowance) can be used in Fixed Pools.

Buffer Pools

Buffer Pools are available for Three, EE, KPN and eSIM plus the following categories of MultiNet tariffs: UK3Net & UK4Net (but not MultiNet UK/EU/USA). You need a separate Buffer Pool for each carrier network. Buffer Pools operate at an account level and can reduce data overage charges significantly.
