

Fixed IP Service

Our Fixed IP service enables the customer to use a true, public, Fixed IP address with all our SIMs, including those on unlimited data tariffs. It is delivered via our infrastructure and custom configurations on our range of Robustel routers.

Our solution is perfect for devices which require a public IP address, such as CCTV cameras and remote monitoring devices. We overlay a stable public IP address onto the Robustel router. The consistent IP addressing ensures a static IP address remains visible both within the LAN and externally for remote access, without the need for IP pass-through.

Features	Potential Benefits
Simple	Public fixed IP address without the need for double NATing.
Flexible	Delivering a Fixed IP to a device behind the Jola Robustel router is also possible with our DIA configurations (NB – not achievable using IP passthrough).
Unlimited Data Tariffs	Take advantage of our unlimited data SIMs, 5G, and the Fixed IP Service – available on the Vodafone, Three and O2 networks.
All data Tariffs	All other Jola tariffs that were not previously available with a Fixed IP can now be used with the Fixed IP Service.
Connectivity Data Options	Other Jola tariffs currently without a Fixed IP can be ordered with our Fixed IP service.
Router Options	Compatible with entire range of Jola Robustel routers, including 5G models. Help available to spread the cost of hardware.
Self-Management	Easy to set up and manage with auto-configuring routers. Easy to manage your network via our Healthcheck app and via SMS.
Full Control	Complete control over your SIM estate via our white label, fully-automated, real-time portal, Mobile Manager.
