

JolaMobile®

JolaMobile is our range of voice and data, data only and M2M/IoT SIMs which are managed in real-time on our white label portal Mobile Manager.

Features	Potential Benefits
Choice of mobile networks	Choice of mobile network includes all major UK operators EE, Vodafone, Three, and O2 with un-steered, multi-network roaming across the UK and globally, using a range of SIMs including (among others) Three, EE, Vodafone, O2 and KPN.
Range of cost-effective tariffs	Data options starting from 1MB tariffs going all the way up to unlimited data. Coverage options include the UK, the EU or global. Data-only plus voice and data tariff options available.
Unlimited* V&D and MBB 4G/5G SIMs	Our unlimited* data SIMs are available on Three, O2 and Vodafone networks on data-only and voice-and-data tariffs. 30 day, 12 month or 24 month contracts are available. These tariffs support 5G subject to device compatibility and network coverage.
MultiNet M2M SIMs (UK / EU / Regional / Global)	Jola offers the following options (all of which are available as dynamic or fixed IP tariffs): • Un-steered multinetwork UK-only tariffs giving access to 3 or all 4 UK networks • Big Data single network options in the UK and Ireland • Multiple tariff options giving coverage where needed across the globe. Including, but not limited to: UK and Europe / The Americas / MEA / APAC • Cost effective un-steered access to a defined list of networks including 3 UK networks, 57 European networks and USA coverage.
RoamNet 901	RoamNet 901 provides a cost-effective, un-steered connectivity solution with seamless access to all 4 UK networks and 65 European networks. It offers highly competitive rates, is 5G-ready on multiple networks across the UK and EU and supports flexible data tariffs from 3MB to 200GB. Delivery options include physical SIMs, QR codes and group SMDP+ provisioning, and the service is fully compatible with bolt-ons and data pools. Tariffs are available as Fixed IP, Private APN or L2TP.
RoamNet Blue Pay-Per-Zone	RoamNet Blue Pay-Per-Zone delivers comprehensive global coverage with flexible, zone-based tariffs. Data is charged on a PAYG (pay-per-MB) basis, according to the zone in which it is consumed. End-users are only billed at higher zone rates when connected to higher-cost networks and automatically revert to lower rates when using lower-cost networks. Partners can view usage in Mobile Manager and bill end-users accurately according to zone-based rates.
EE M2M Roaming SIMs	Our EE M2M SIMs are designed for M2M applications. Partners choose from: • Tariffs that deliver single network coverage in the UK • Multi-network unsteered roaming coverage in the UK/EU/USA • 'Big Data' tariffs that deliver single network coverage in the UK at extremely competitive rates between 10GB and 5TB.

Features	Potential Benefits
LPWAN (NB-IoT and LTE-M)	Jola supplies NB-IoT and LTE-M coverage, available for long-term deployments (potentially over 10 years) in battery powered devices. UK and International coverage available.
Fixed IP SIMs	SIMs with a true public fixed IP (no 1:1 NAT) are available across multiple operators, automatically protected via Cloudflare's international IP network. EE fixed IP tariffs are also available with 1:1 NAT where required.
Private APN	Our Private APN enables secure, private 4G/5G networks that bypass the public internet, routing traffic through Cloudflare for enhanced protection and performance. Ideal for customers needing remote access to 4G/5G devices or enhanced security without relying on expensive static IP SIMs. The customer retains full control of mobile data traffic, enabling custom routing, content filtering, and ISP backup. There are no setup fees and low monthly charges. Setup is quick and easy via Mobile Manager. Jola's Private APN can be used with SIMs located globally and is managed in real time.
L2TP SIMs	ISPs that want to offer L2TP pre-ethernet connectivity, 4G/5G backup, or stand-alone 4G/5G connectivity are catered for by Jola. Multiple interconnect options are available. A wide portfolio of tariffs meets all customer requirements, all fully managed via Jola's easy to use online Mobile Manager platform. L2TP traffic is automatically protected via Cloudflare's international IP network, delivering added security and resilience.
4G/5G routers	Order smart routers that auto-configure. They have unique features that can be delivered directly to customers.
Online management portal	Mobile Manager is our online management portal for ordering and managing estates of mobile data SIMs. Manage activations, ceases, suspensions, reports, alerts and bolt-ons for SIMs in real-time.
Business-grade Service Level Agreement	24/7 access to our Technical Support Team.
Data Pools	Partners select the type of data pool they require: Fixed / Aggregated / Buffer / Bucket and the Pool size that they need e.g., Fixed Pools start at a 25GB monthly allowance but go up to 10TB and beyond. Aggregated Pools change size every time a SIM is added or removed. Buffer Pools operate at Network level and can reduce data overage charges significantly. Data Buckets are available in 1TB increments and expire when the data is fully consumed or when it reaches its 12-month expiry date – whichever happens first.

* Fair usage policy for Vodafone and O2 allows for data limit of 650GB. Fair usage policy for Three allows for data limit of 1TB. See price list for further details.
